

ThumbDriver™ | 2nd GENERATION

A robust, custom, functional solution.

The **ThumbDriver** is a body-driven prosthesis designed for finger and partial-hand limb difference at the proximal phalanx of the thumb.

The addition of a **ThumbDriver** can restore 2- and 3-point pinch, allow for secure medium and large diameter grasp patterns, and can increase fine motor/dexterity function.

IDEAL ANATOMICAL PRESENTATIONS FOR FIT:

This device is driven by an intact MCP joint and tracks the motions of the CMC joint. Suspension is maintained with enough residuum to engage the ring.

For a person with finger and partial-hand limb difference who doesn't meet the typical requirements for the **ThumbDriver**, it is still possible to obtain functional benefit from an added device. Our engineers customize the design to fit your patient, resulting in a functional device.

Our intake form will walk you through the steps of ordering a device using a Naked Prosthetics sizing kit, casting a positive hand mold, submitting detailed pictures of both hands, and a video showing range of motion.

UNIQUE FEATURE + FUNCTION:

This design includes an adjustable pre-flexion option made for on-demand adaptation by the device wearer to fit the needs of the task at hand. This makes many functional pinch and grasp patterns easier to achieve.

The Conductive tip option for touchscreen use is available for all devices.
